Key words: Lepidoptera, Pallars Sobirà, Vall de Cardós, Alt Pirineu Natural Park, Catalonia, Iberian Peninsula.

Amb motiu de diverses estades a la comarca del Pallars Sobirà s'han dut a terme prospeccions, tant de dia com de nit, el resultat de les quals s'exposa en el present treball.

Amb anterioritat ja havíem publicat el resultat de prospeccions fetes al Pallars Sobirà, especialment a la zona de l'Alt Àneu (Guzmán 2007); les dades que s'aporten seguidament ajuden a complementar el coneixement del cens de lepidòpters d'aquesta comarca pirinenca, així com la seva distribució.

Altres autors també han aportat dades d'espècies observades a la comarca i al parc natural (Garre 2008; Ortiz *et al.* 2010; Lockwood 2011; Garre *et al.* 2011, 2013, 2015, 2016, 2017).

Per dur a terme les prospeccions dins l'àmbit del Parc Natural de l'Alt Pirineu vam comptar amb l'autorització de la direcció del parc, a la qual volem agrair la seva col·laboració en el lliurament dels permisos.

Pel que fa a la metodologia utilitzada, s'ha fet servir la mànega entomològica per a les espècies diürnes i paranyes de llum actínica de 6W per a les nocturnes. A més, esporàdicament també es van utilitzar esquers de fruites.

Per a les papallones nocturnes (Heterocera), la prospecció s'ha centrat principalment a la zona de la Vall de Cardós, tant dins dels límits del parc com en zones limítrofes. Per a les papallones diürnes (Rhopalocera), a part de prospeccions dins del parc, també s'aporten dades de les observacions fetes en diverses localitats durant les excursions dutes a terme per la comarca del Pallars Sobirà.

Les localitats on s'han fet les prospeccions de nit són:

Tavascan: UTM 31TCH52

Estaon: UTM 31TCH51

Benante: UTM 31TCH51

Surri: UTM 31TCH51

Altres localitats citades amb motiu d'excursions són :

Quanca: UTM 31TCH52

Port de Ratera: UTM 31TCH31

Estany de Ratera: UTM 31TCH31

Estany de Naorte: UTM 31TCH62

Estany de Sant Maurici: UTM 31TCH31

Alins: UTM 31TCH62

Son: UTM 31TCH42

A continuació es presenten les dades obtingudes. Quan en la relació d'espècies les localitats van seguides de (PN) volem indicar que la prospecció s'ha fet dins del perímetre del Parc Natural de l'Alt Pirineu, i quan van seguides de (PNL), que les observacions s'han fet dins del Parc Nacional de Sant Maurici-Aigüestortes.

Per a la nomenclatura i sistemàtica de les espècies hem seguit Vives Moreno (2014).
